

# PROJECT ASSOULZVERSE ecosystem

# introduction

AssoulZ Verse is a project that is based on the “play to earn” principle. Each player on the AssoulZ Verse project servers receives a reward in the form of our token - AssoulZ (\$ASLZ).

Each of our servers interacts with the token blockchain, which allows users to securely withdraw ASLZ tokens to their crypto wallet addresses.

To gain access to the project’s game servers, 10,000 NFTs were generated - each NFT has its own rank, namely: VIP status, in-game privileges, in-game funds. 1000 NFTs were also generated to replenish the in-game balance - which allows players on the project servers to develop their character faster, as well as earn more tokens!

Our project provides a unique opportunity for players to receive rewards for their efforts in the game, creating a new level of interaction between the gaming industry and the financial world. Project Assoulz Verse offers a fun gaming experience and the opportunity to earn real money, making it attractive to many players.

# decentralization...

## why?

The AssoulZ Verse project is decentralized thanks to the use of blockchain technology. Unlike centralized systems, where management and data are controlled by a single organization, decentralized systems use a distributed network of nodes, making them more resistant to censorship and interference. AssoulZ Verse also uses smart contracts that automatically fulfill the terms set in them, without the participation of intermediaries. This gives users greater transparency, security and control over their assets and transactions, making AssoulZ Verse a perfect example of a decentralized gaming platform.

The benefits of decentralization include:

**Censorship Resistance:** Decentralized systems are not controlled by a single organization or government, making them more resistant to censorship and interference.

**Transparency:** Through the use of blockchain technology, decentralized systems provide transparency and verifiable transactions to users.

**Reduced risk of hacker attacks:** Decentralized systems are distributed across a network of nodes, making them less vulnerable to cyber attacks and hacker interference.

**User Control:** Decentralized systems allow users to have greater control over their data, assets and transactions without having to trust centralized structures.

**Innovation opportunities:** Decentralization promotes the development of various innovative projects such as cryptocurrencies, decentralized financial services and smart contracts.

These benefits make decentralization attractive to many users and entrepreneurs, especially in the context of finance, gaming, data sharing and other areas where privacy, transparency and censorship resistance are important.

# TOKEN ASSOULZ (\$ASLZ)

AssoulZ is a token created on the BEP-20 blockchain, which is a digital asset that is used to reward players of the AssoulZ Verse project. Users can earn AssoulZ tokens for participating in various activities, such as creating content, participating in polls, etc. AssoulZ tokens can also be used to purchase virtual goods, participate in games, or exchange for other cryptocurrencies.

The main goal of creating the AssoulZ token is to create a convenient and secure platform for conducting transactions with virtual assets. The token ensures transparency and reliability of transactions, thanks to the use of blockchain technology, which allows you to track all transactions and provides protection against fraud.

Overall, the AssoulZ token provides a convenient tool for participating in the virtual economy and investing in virtual real estate, providing users with access to various opportunities and potential profits.

# PURPOSES and OBJECTIVES OF the ASSOULZ VERSE PROJECT

AssoulZ Verse project strives to:

1. Create a unique system with a wide range of user capabilities for using the AssoulZ token in the real life of every person.
2. Develop a cryptocurrency ecosystem within the project to carry out various transactions and rewards.
3. Attract and create your own community of fans of the AssoulZ Verse project.
4. In the 1st version of the project - identifying all the shortcomings of the project, increasing the stability of the gameplay, finalizing and introducing new game ideas.
5. Development of a social media project - reward for the asset, creative or other work of users.
6. Access to decentralized exchanges.

# TOKENOMICS

The internal economy of the AssoulZ Verse project is based on the use of in-game funds that the player earns while playing on the project servers. With these in-game funds, the player can buy in-game items, use them as an exchange for goods or services, upgrade their character, and much more. The player can also exchange in-game currency for AssoulZ tokens (\$ASLZ) on a 1:1 basis.

The game has also developed a system of rewarding players for storing AssoulZ tokens on their in-game account - every game hour the player receives a percentage of the investment amount, this percentage depends on the level of the player's VIP status. This system allows players to additionally earn AssoulZ tokens.

AssoulZ tokens (\$ASLZ) - provide rewards to users for their activity and participation in various events within the project.

A total of 500,000,000,000,000 AssoulZ tokens were generated. Their distribution will be as follows:

- 50% of the amount has been allocated to reward players of the AssoulZ Verse project, which amounts to 250,000,000,000,000 AssoulZ tokens.
- The main investors of the project were allocated 20% of the amount, which amounts to 100,000,000,000,000 AssoulZ tokens.
- For rewards for active participants, airdrops, etc. 1% of the amount has been allocated, which is 5,000,000,000,000 AssoulZ tokens.
- 29% of the amount available for purchase on decentralized exchanges, which is 145,000,000,000,000 AssoulZ tokens.

# CONCLUSION

AssoulZ Verse is an innovative project that combines the world of virtual reality and blockchain technology, creating a unique platform for the creation and exchange of digital assets. In this era where virtual reality is becoming increasingly popular, AssoulZ Verse offers a new level of interaction and possibilities.

The main goal of the AssoulZ Verse project is to create a virtual universe where users can interact with each other, create and trade unique digital assets. Using blockchain technology, the platform ensures transparency, security and independence of ownership of digital assets. These assets can be sold or exchanged with other users on the platform.

Overall, AssoulZ Verse breaks new ground for virtual reality and digital assets. We believe that AssoulZ Verse will become a key player in the development of virtual reality and blockchain technologies, and we invite everyone to join us on this exciting journey.
